

PROSECUTOR 2000

(4 inch LCD)

TRUNK MOUNTED UNIT

Operation Manual

Please Read

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE. DANGEROUS HIGH VOLTAGE IS PRESENT INSIDE THE ENCLOSURE. DO NOT OPEN THE CABINET. REFER SERVICING TO QUALIFIED PERSONAL ONLY.

CAUTIONS: TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE OF PLUG TO WIDE SLOT, FULLY INSERT.

NOTE: This equipment has been tested and found to comply with the limits for class A digital device, pursuant of part 15 of the FCC Rules. These limits are designed reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions manual, may cause the harmful interference to radio communications. Operations of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

USER-INSTALLER CAUTIONS: YOUR AUTHORITY TO OPERATE THIS FCC VERIFIED EQUIPMENT COULD BE VOIDED IF YOU MAKE CHANGES OR MODIFICATIONS NOT EXPRESSLY APPROVED BY THIS PARTY RESPONSIBLE FOR COMPLIANCE TO PART 15 OF THE FCC RULES.

Foreword

We thank you for your purchase of the PROSECUTOR 2000 SYSTEM (Trunk Mounted Unit). You have purchased a high quality system that will provide you with many years of trouble free service.

Should you have any question about the system, or any problems, please call (800)- 482-9211 or fax (281)-443-9079. We service all components of the system in house as well as through our ever-growing Dealer Base

This guide will provide the user with enough information to operate the PROSECUTOR 2000 properly and effectively. As you read through this guide, if you have any questions, ideas, or suggestions about the system or the guide itself, please feel free to call us at your convenience.

Thank You

ProTex, Inc.
1617 East Richey Road.
Houston, Texas 77073-3512

Features & Specifications

CONTROL HEAD

OPERATION MANUAL

Features

System Features

- Smallest Trunk VAULT Available
- 16 X optical Zoom Low Light Auto Focus Camera, 1.0 Lux, 8X Digital Zoom
- Easy to use over head controls
- Programmable Industrial Grade VCR with proprietary RS-232 Controller
- Environmentally Controlled VCR .
- Record activation by body transmitter control
- Backseat Microphone Included
- Record Over Protection
- Radar Gun Interface included as Standard Equipment
- On-screen Time and Date Stamp with Title
- Manual and Automatic Operation
- Camera Position can easily be adjusted via Windshield Bracket
- Backseat Camera available

Features & Specifications

Camera

- Model AVE-8002
- Hi-Resolution More than 450 TV Lines – Solid State
- Optics Lens - X16 Zoom (f=3.9-63mm)
- Min. Illuminance 1.0 Lux
- White Balance Auto/Preset/Manual
- Digital Zoom X8
- Operating Temp. 0 deg.C - 40 deg. C
- Power 12V(2V / 4W)
- Dimension 2.65”W X 2.56”H X 4.4”D
- Regulation FCC – Class A
- Focus Auto/Near/Manual/Wide
- Back Light Compensation

Control Head

- 4 inch color TFT LCD monitor.
- Durable membrane switch with backlight.
- Both LCD monitor and switch backlight can be turned off for “quiet” operation.
- Audio volume control and LCD brightness control
- LED output indicating both audio and recording are functional.
- Constructed with 18 gauge steel. Dimension 11x6.25x3 inches.

Vault

- Constructed with 14-gauge steel, lockable and tamper resistant
- Dimensions: 11.5”W X 6.5”H X 16”D
- Bracket mounted in trunk
- Non-reflective black powder coated matte finish
- Tamper resistant locking door
- Environmentally Controlled
- Specialty Radar Interface ready
- Dual Microphone Capability (optional)
- Shielded antenna input

Features & Specifications

VCR

- Industrial grade VHS format Mobile recorder
- Operating Voltage 8.5V to 15V DC / 15W
- Operating Temp 0 to 40 (C (32 to 108 (F)
- Recording Method Dual-head
- Recording time 8 hour (with T-160 tape)
- FFW/REW Time < 5 minutes using T-120 tape.
- Horizontal Resolution > 250 lines
- On-screen display Time/date, Title, 3 indicators, tape time, VCR status, Radar Gun Readout and programming menu when selected
- RS-232 interface to most Radar and Laser speed measuring devices
- Automatic search for the last recorded portion of tape before recording
- Recording can be started with Audio transmitter, Siren signal, or Light signal
- Recording can be activated with Overhead Controls

Audio Transmitter and Receiver

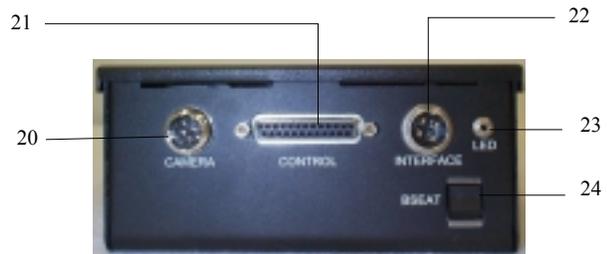

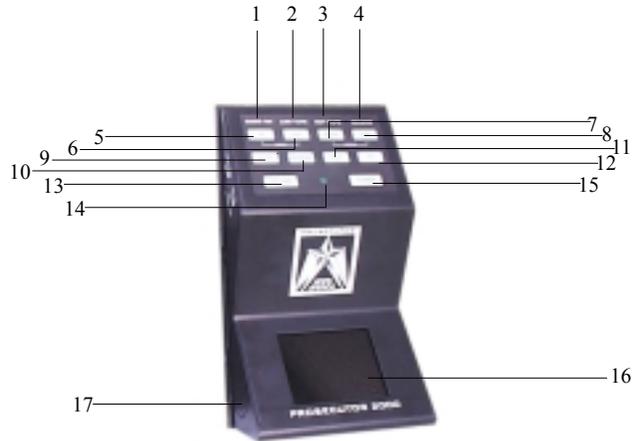

- Transmitter dimension 3.5" X 2.5" X 1"
- Lavalier wireless microphone system made by Shure
- Frequencies in VHF range – currently 8
- Working range - 300ft
- Battery life – 18 to 20 hour with 9V alkaline battery
- Wind-screen and tie clip
- Holster – forward cantered; optional patent leather or basket weave
- Audio receiver mounted inside the vault
- Shielded antenna mounted on trunk– ¼ wave whip design

Wiring Harness

- Control cable 25-conductor shielded with DB-25 connector
- Power cable 16 gauge stranded – fused to battery
- Radar interface 2-conductor shielded with DB-9 connector (optional)
- Antenna Shielded 75 coax terminated via BNC to chassis of vault

Instructions in Brief

Control Head

1. AUDIO ON

The Audio Light will be ON when the wire less microphone is turned ON.

2. LOW TAPE

The Low Tape Light is the warning that the tape is about to END.

3. OUT TAPE

The Out Tape light indicates that this is the end of the tape.

4. RECORD

The Record light indicates that the VCR is in Recording mode.

5. ZOOM IN

Press this button to Zoom In the image of the front camera.

6. ZOOM OUT

Press this button to Zoom Out the image of the front camera.

7. NEAR FOCUS

Press this button to focus the objects.

8. FAR FOCUS

Press this button to focus the objects.

9. STOP

Press this button to STOP the tape.

10. REWIND

Press this button to Rewind the tape while the VCR is in the stop mode or Press in Play mode to do a reverse picture search.

11. PLAY

Press this button to start the play back mode.

12. F.F.

Press this button to Fast Forward the tape while VCR is in the stop mode or Press in Play mode to do a forward picture search.

13. RECORD

Press this button to start the recording. The light on the Record button (No. 4) will be on when the VCR is in the record mode.

14. IR REMOTE SENSOR

Point the IR remote toward the sensor.

15. POWER

Press to turn the power on and off.

16. LCD DISPLAY

This Displays the live images of the camera or recorded images off of the VCR.

17. SPEAKERS

Plays the live sound from the microphone or from the VCR.

18. BRIGHTNESS

This controls the brightness of the LCD display.

19. VOLUME/ MONITOR CONTROL

Move this knob clockwise or counter clockwise to control the Speaker's volume. You can also control the LCD monitor and control head's display light by this knob.

20. CAMERA INPUT

Connect the front camera to this connector.

21. CONTROL

DB-25 connector for control head interfacing with vault.

22. INTERFACE

connector for interfacing with siren and white light bar.

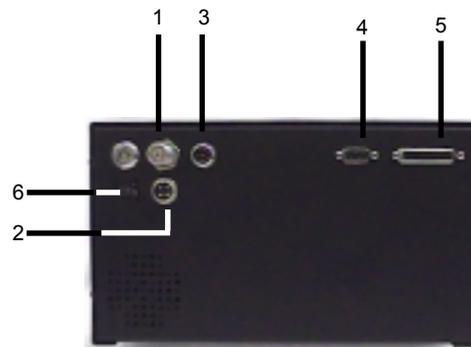

23. LED

This LED will turn ON when the VCR receives the Record and Audio signal from the control head. This will help the officer determine the control head record status from outside the vehicle.

24. BSET

You can select the front or rear camera/ microphone by switching the BSET switch.

Vault

1. Antenna Connector

2. Power Connector

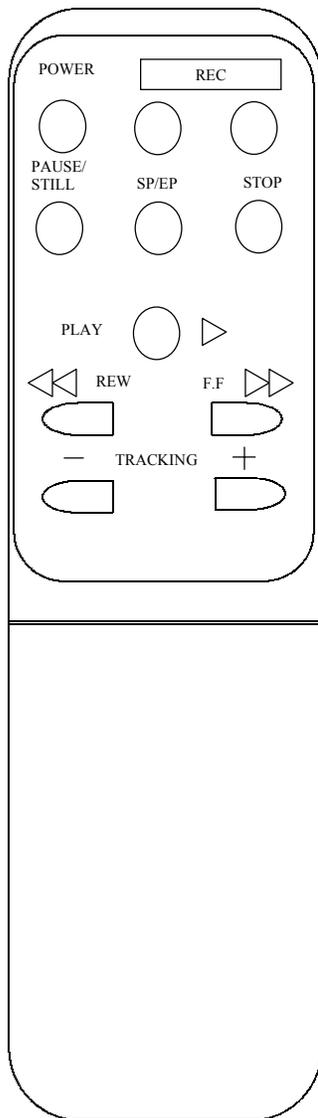

3. Rear Camera & microphone connector

4. DB-9 Connector for Radar Gun

5. Vault Control Connector

6. 3 Amp Circuit Breaker

IR Remote Control

POWER

Don't use this button. The VCR power is controlled by the internal microprocessor. The VCR will automatically power up when 12VDC is applied to the VCR.

REC

Press these two (2) buttons simultaneously to manually start recording.

PAUSE/STILL

Press during recording to pause recording. Press during the playback to freeze the picture.

Caution: If this button is held for 6 seconds then it will master reset the VCR and clear all the programming to factory default.

SP/EP

Don't use this button. Recording speed can only be set in the on screen programming mode.

STOP

Press this button to stop a running tape. Alternatively press and hold that button for 3 to 5 seconds to access the programming mode.

PLAY

Press this button to start the play back mode.

REW

Press to rewind the tape during the stop mode and to reverse picture search in play back mode.

FAST FORWARD

Press to fast forward the tape during the stop mode, and forward picture search in the play back mode. In programming mode use this button to access the menu selection.

TRACKING

Use (+) or (-) button to manually adjust the tracking of the picture. In the programming mode use these buttons to move the cursor upward or downward.

Installation

To properly install the Prosecutor 2000 System, please read and perform each of the following steps in order.

Preparation

Disconnect the car battery cables. Remove the lower half of the rear seat. Remove the kick panel and trim strips on front and rear passenger side of the car. Remove or loosen the lower half of the trim on the door post between the front and the rear door enough to get cables under.

Camera Mount

Remove the mount foot from the camera mount. If you are using a windshield mounted camera, mount the foot to the window by following the directions on the included adhesive package, making sure to follow the instructions exactly. If you are not mounting the camera to the windshield, follow the directions on the adhesive package and mount the foot in the desired location, paying special attention not to obstruct air bag deployment. Allow adhesive to set until the end of the installation before mounting the camera.

LED

The LED wire connection will hook into the rear of the Control head. Place the LED cable somewhere on the front dashboard, making the LED end visible outside the front windshield of the vehicle. (On the driver side of the windshield is recommended. This way the cable can be placed up the side panel and run across the edge of the headliner to the rear connection of the control head.)

Trunk Unit Mount

Place the unit in the desired location of the trunk. Make sure that the unit can be unlocked and opened easily, and tapes can be loaded and ejected conveniently.

Checking accessibility of vault and tape insertion

Unlock the unit and remove the base plate. Pay attention to the location of the gas tank. If this is a Crown Victoria installation, use the mounting brackets.

Note: If the unit is going to be mounted on the shelf next to the spare tire, special care must be taken to avoid drilling into the gas tank and the mounting brackets must be used.

Assembly of the mounting brackets to the base plate of vault

Mounting of the mounting brackets with base plate of vault attached

Completed assembly of brackets and base plate of vault

Trunk Mounting Cont.

Connect the Control Console cable, rear Camera and Mic cable, Antenna cable and the Power cable to the rear of the vault. Bundle the cables to create a service loop so that the vault can easily be unlocked, removed from the base plate and cables disconnected.

Attaching the cables to the rear of the vault.

Control Console

Remove the control head mounting plate from the control console (4 screws on front). Remove the sun visors inner attachments (closest to the rear view mirror). Position the control mounting plate between the sun visors such that when the control box is attached, the monitor can be viewed from driver's position. Align the hole over the sun visor's inner attachment holes and reinstall the sun visor attachments, making sure the control head mounting plate is captured by the attachments. If additional support is desired (requires making holes in headliner), 3/4 inch self-drilling screws can be used to attach the mounting plate to the secondary metal under the headliner. Wait to mount the control box until the end of the installation.

Note: If you have a ticket light (round light) added to your vehicle, you have to use the ticket light adapter.

Attaching the Control head mounting plate between the sun visors.

To determine whether or not you need the ticket light adapter, position the control box behind the light. You should have at least 2 inches between the control box and window, but still be able to get to the monitor controls on top of the control box. Most Ford Crown Victoria's will not need this, most Chevy Caprices will.

Antenna Mount

This is a common lip antenna. Position the antenna at the desired location on top of the trunk. For mounting see the instructions enclosed with the antenna.

Note: If the Radio Frequency Interface is significant, a permanent 1/4 inch wave VHF antenna may be needed to mount through the fender of trunk.

Rear Camera & Microphone

Position the camera and microphone to the desired location at the rear of the vehicle. For mounting, see the instructions enclosed with the Rear Camera.

Interface Cable

This is the gray cable with a 4-pin connector on one end and the orange, black, blue, and white wires on the other end. Route the interface cable from the control head to the fuse box. Start at the center of the headliner, to the driver side of the central cable, leaving about 4 inches of the 4 pin plug end of the cable hanging down. Route across, under edge of the headliner, down the door to the fuse box. Attach the **orange** wire to switched 12 V. Extend **white** wire to the light box wire that gets 12 V when the overhead lights are activated. Attach the **blue** wire (+) and the **black** wire (-) to the siren. If the siren is AC instead of DC, you can use the same connections.

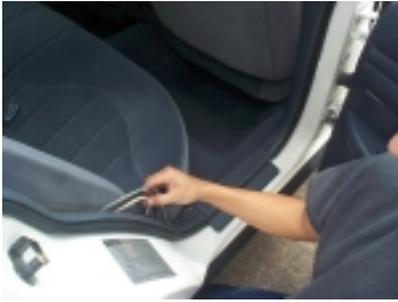

*Note: For AC-The Blue wire is **Hot**, the Black wire is **Neutral**.*

DB-25 Control Cable

This is the 25 foot DB-25 male to DB-25 male cable. Connect one side of the cable to the control head and other to the vault. Route the cable through the backseat to the front of the car, up the front door post, along the front edge of the headliner, to the middle of car. Leave about 4 inches hanging from the headliner. (Pictures of cables being routed located on next page with Power Cable routing)

Power Cable

This is the gray cable with red and black wires on one end and a 4 pin connector on the other end. Verify the 4-pin connector is connected to the vault in the trunk. Route the cable through the rear seat panel, under the back seat and carpet, to the battery area of the car (routing through the firewall to the battery is preferred). Secure the red wire to +12 V (through the firewall to the battery is the best way). Connect the black wire to chassis ground.

View of DB-25 and Power Cables coming from trunk, positioned behind the rear passenger side seat, heading toward front passenger seat. Note: cables go under carpet.

View of DB-25 located on front passenger side, under trim, heading upward toward headliner. Note: Power Cable will go through firewall towards battery.

View of DB-25 Cable, under headliner, heading toward control console.

Final Assembly

Attach the front camera to the camera mount and attach the camera cable to the control box. Also, attach the control cable, interface cable and LED cable to the control box. Securing the cables out of sight in the headliner, mount the control box to the back plate using the 2 screws that were previously removed. Secure vault to base plate and lock in place. Verify cables are properly routed and are not pinched or in a bind.

View of camera being attached to windshield mount. Note: Cable of camera goes upwards into headliner.

View of DB-25, Interface, LED, Camera and Power Cables being connected to Control Console.

View of control console being mounted with wires already attached to connections

Reinstall previously removed panel, trim, seats and other hardware. Reconnect car battery cables.

Power up the system

Attach completing the installation assembly, turn on the volume/monitor control switch. If the light on the POWER does not turn on, check all the system connections and fuse in the power cable near the car battery. If the "POWER" light is illuminated on the control console, the system can be turned on by using one of the following methods:

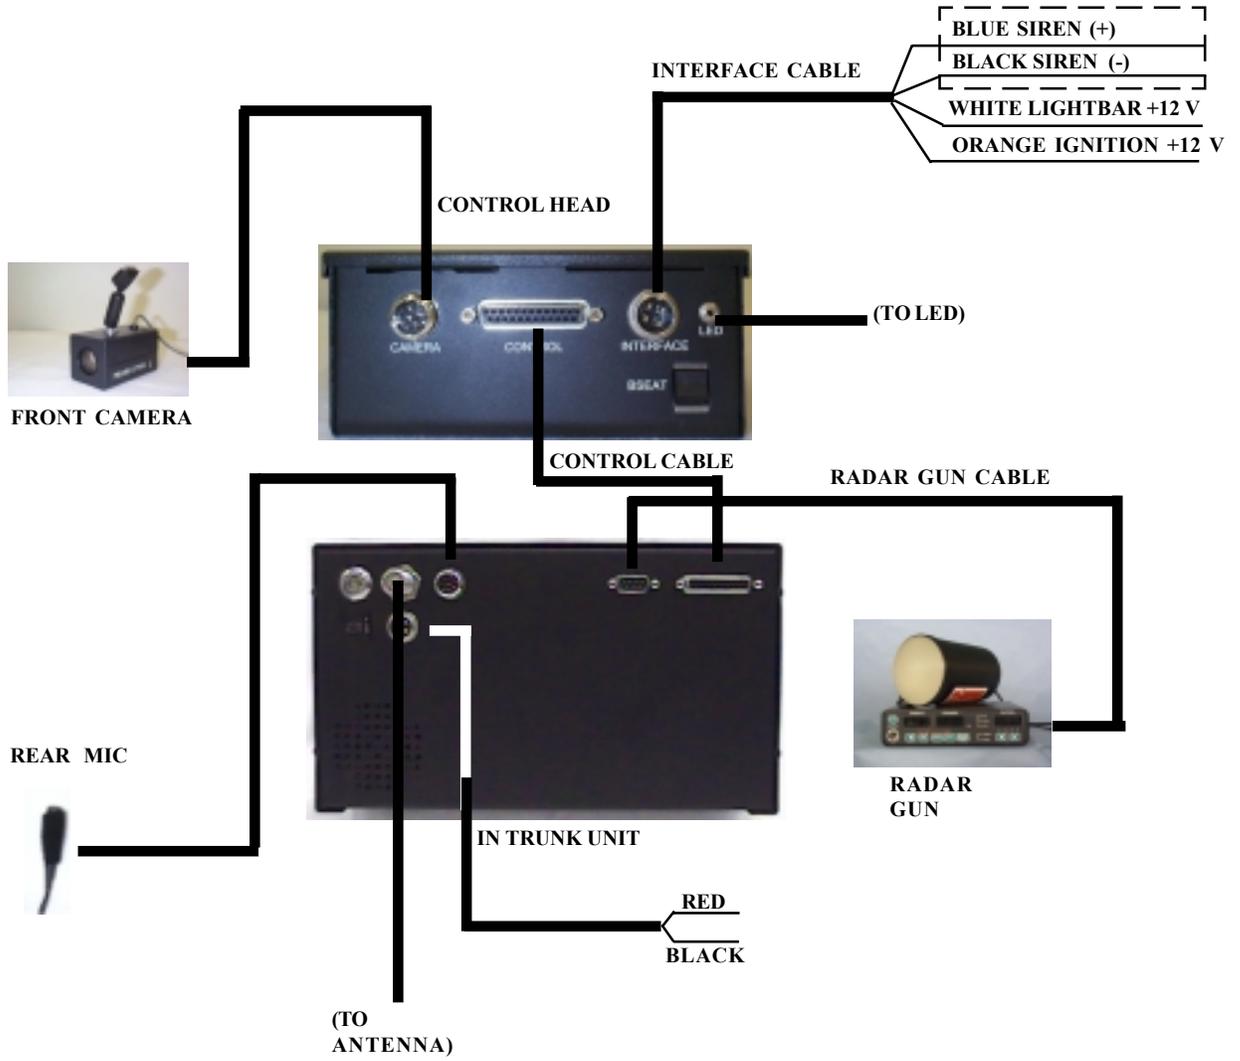

Control console activation - Press the "POWER" button on the control console.

Microphone activation - Place the remote microphone transmitter power switch in the "ON" position. The green LED will illuminate on the microphone transmitter and the system will be powered up.

Power up the wireless receiver

The audio receiver powers up automatically when the power cable is connected to the battery and the control cable is connected to the control console.

Connections

Basic Operations

POWER UP THE SYSTEM

Complete the installation of the “In Trunk system” as describe in the previous section. Turn On the volume/monitor control switch. If the light on the Power does not turn on, check all the system connections. If Light on the POWER is on then you can turn on the system using one of the following methods:

1. From Control Head:

Press the “POWER” button on the control head and it will turn “ON” the system

2. Microphone Activation:

Place the Microphone/Transmitter power switch in the “ON” position, the green LED will come on the Microphone/Transmitter and the system will automatically turn on.

POWER UP THE WIRELESS RECEIVER

The audio receiver powers up automatically when the power cable connects to the battery and the control cable connects with the control head.

Note: The wireless receiver consumes 140 mA of current. We recommend to disconnect the Control cable from the Control head if the vehicle is not used for more than a week.

INSERT CASSETTE

First power up the system, then insert the tape into the cassette compartment until the VCR pulls the cassette in.

Note: Do not force the tape in the mechanism or this will damage the VCR. If the input voltage is less than 12 VDC, then VCR will not accept the cassette.

START RECORDING

You can start recording by either pressing the control head’s “RECORD” button or pressing the record buttons on the IR remote control. When the VCR is in the Record mode the light on the VCR’s RECORD button will be ON. You can also program the VCR to power up in the Record mode.

Note: See the Record Setting under the programming for more details.

STOP RECORDING

Press the “STOP” button on the control head or press the “STOP” button on the IR Remote control to terminate the recording.

EJECTING THE TAPE

Press the Stop/Eject button on the VCR once to stop the recording and press it again to eject the cassette. When the cassette approaches the end of the tape, a “LOW TAPE” light will illuminate on the control head. When the end of the tape is reached, the control head will begin “beeping”, and the “OUT TAPE” light will illuminate on the control head. You can press the “STOP” button from the control head, or use the IR Remote Control, or eject the cassette from the VCR to stop the beeping. A “CASS OUT” message will appear on the LCD display acknowledging that the Cassette is out of the VCR.

Programming

In this section we discuss some of the powerful programming features of the “in trunk system”. The programming mode can only be accessed by using the IR remote control. The following table shows some of the IR- Remote button functions used in the programming mode.

Things to Note:	
“STOP”	- Press and hold the remote control’s “Stop” button for 5 seconds to access the mail menu
“F.F.”	- Press this button to enter or exit any selection
“+”	- Press this button to move the cursor up
“-”	- Press this button to move the cursor down

ACCESSING MAIN MENU

To access the on screen programming press the “STOP” button of the remote control for about 5 seconds. The following programming menu will be appear on the monitor of the control head LCD.

Main Menu
Set Time/Date
Titler
Messages
Record Setting
Display Setting
Rader Gun Inteface
Master Reset
Exit

TIME & DATE SETUP

An Internal clock generates the time and date that is super imposed on the LCD display. After the clock is set, the date and time modes are displayed on the monitor screen (live picture).

Display Time & Date on Screen

- 1 Under the “Display Time & Date” menu place the cursor in front of T/D display and press the “ F.F.” button of the remote control.
- 2 Press the “+” or “-” button to select “ON” or “OFF”.
- 3 Press the “F.F.” button again to make your selection.
- 4 To exit out of the Display Time & Date, place cursor in front of “Exit” and press the “F.F.” button.
- 5 Exit out of all of the menus to activate above your selection.

Time / Date	
T/D Display	ON
Time Format	12 Hour
Date Format	MM/DD/YY
Set Time/Date	
Reset Time/Date	
Exit	

Selecting Time Format

- 1 Place the cursor in front of “Time Format” and press and release the “F.F.” button.
- 2 The cursor will start blinking.
- 3 Now push the “+” or “-” button to select either the “12” or “24” time display modes.
- 4 After selecting the desired mode press and release the “F.F.” button.
- 5 Exit all of the menus to activate your selection.

Selecting Date Format

- 1 Under the "Time & Date" menu place the cursor in front of "Date Format" and press the "F.F" button.
- 2 The cursor will start blinking.
- 3 Chose the format from the selection yy/mm/dd or mm/dd/yy or dd/mm/yy by pressing either the "+" or "-" button.
- 4 Exit of all the menus to activate your selection.

Set Time & Date

- 1 Under the "Time & Date" menu, place the cursor in front of the "Set Time/Date" and press the "F.F." button.
- 2 The "Time and Date" window will pop up on the screen as shown in the figure below.

- 3 By pressing the "+" or "-" button you can change the Time or Date.
- 4 Press the "REW" and "F.F." button to move the cursor either left or right side.
- 5 After setting the Time and/or Date press the "STOP" button.
- 6 Exit all of the menus to activate your selection.

Reset Time & Date

- 1 Under the Time & Date menu select "Reset Time/Date".
- 3 Press and release the "F.F." button.
- 4 It will reset the time and date to the factory default settings.
- 5 Exit all of the menus to activate your selection.

TITLER

You can program up to a 20 character title on the screen. Follow the following steps to program the title on the screen. The default title is "PROSECUTOR 2000".

- 1 Press the "STOP" button of the remote control to access the main menu.
- 2 Place the cursor in front of the title using the "+" or "-" button then press and release "F.F." button to accept the selection.
- 3 Use the "+" or "-" button to select an alphanumeric character.
- 4 Use the "F.F." button to enter next character or use "REW" button to edit a previously entered character.
- 5 You can enter up to 20 characters in a title.
- 6 After entering the title press and release the "STOP" button to exit out of the title editing mode.
- 7 Exit all of the menus to activate your selection.

THINGS TO KNOW
"-" button moves the alphabet in ascending order and numerics in descending order.
"+" button moves the alphabet in descending order and numerics in ascending order.
"F.F." button moves the cursor toward the right position.
":REW" back space.
"STOP" Exits out of the editing mode

MESSAGES

The trunk system has two message inputs, each message can display up to 10 characters. These messages are activated on the LCD display when the "in trunk system" gets a signal from the interface cable (if siren or lights are on). See the Installation section for the connections (pin-outs) of the interface cable. By default the "SRN" message appears on the screen when the siren is on. Similarly, the "LTS" message appears on the screen when the lights are turned on. The message "Record" comes on when an input is received (Lights or Sirens) by the VCR and the VCR begins recording.

- 1 Press and hold the "Stop" button of the IR remote control for 5 seconds and the main menu will pop up on the screen.
- 2 Place the cursor in front of "Message" using the "+" or "-" button.

Set Message		
Message 1		
Message 1 Record		ON
Message 2		
Message 2 Record		ON
Message 3		
Message 3 Record		ON
Exit		

- 3 To make a selection press the "F.F." button, and the above menu will pop up on the screen.
- 4 Place the cursor in front of the message that you want to change and press the "F.F." button.
- 5 A blinking cursor will appear the screen.
- 6 Enter the letter or numeric character, using the "+" or "-" buttons.
- 7 After entering the first letter press the "F.F." button to move the cursor to the next place.
- 8 Again use the "+" or "-" button to select the next letter.
- 9 Repeat steps 6 to 8 until you enter the complete title.
- 10 After entering the title press the "Stop" button, it will return you to the Message sub menu.
- 11 After entering the title, place the cursor in front of Message "1 Record" and press the "F.F." button.
- 12 Press the "+" or "-" buttons to turn the message recording ON or OFF.

- 13 Enter message 2 the same way message 1 was entered.
- 14 Exit all of the menus to activate your selection.

RECORD SETTINGS

Access the sub menu of the Record Setting by placing the arrow next to Record setting and press the "F.F." button. The following sub menu will appear:

Recording Setting	
Recycle Rec	OFF
Rec-over Protect	OFF
Power-up Record	OFF
Alarm Rec Dwell	3 min
Exit	

RECYCLE RECORD

If you turn on this feature, at the end of the tape, the VCR will automatically rewind the tape and record over previous recorded information.

REC OVER PROTECT

If you turn on this feature, the VCR will NOT record over previous recorded information. Instead it will search the tape to find the end of the recording and begin the new recording there.

POWER-UP REC

If you turn on this feature, the VCR will begin recording as soon as the VCR is powered up.

Note: A tape must be in the VCR to begin "Power-Up Rec".

The default for these 3 settings (Recycle Record, Record over and Power-up Record) is "OFF". To change any or all settings to "ON", place the arrow beside the item, press the "F.F." button, and the arrow will start blinking. Press the "-" or "+" button to switch between ON or OFF. Make your choice and press "F.F." to save the selection and return to the sub menu.

ALM REC DWELL'S

Alarm Dwell's default setting is 1 minute; the settings available are: 0, 1, 2, 5, 10, 15, 20, and 30 minutes. The setting you choose will be the minimum recording time after the Alarm Record Signal goes from high to low, or active to inactive. To change the default settings of alarm Record Dwell, place your cursor in front of Alarm Rec Dwell under the Record settings menu and press and release the "F.F." button. Use the "+" or "-" key to select the required time. After making the selection press the "F.F." button and it will return you to the Record settings menu.

TAPE SPEED

The default setting for this feature is T120/EP in NTSC mode and T180/SP in the PAL mode. Consult the following table for correct mode of recording. An EP setting will triple the number of minutes of recording time, i.e. 3 x a 120 or 160 min. tape. An SP setting enables the exact number of minutes of recording time, as stated on the tape (usually labeled T120 or T160).

When you are finished with the sub-menu, move the arrow to EXIT and press the "F.F." button. to return to the main menu.

TYPE	RECORDING MODE	SYSTEM	RECORDING TIME
T120	SP	NTSC	2 hrs
T120	EP	NTSC	6 hrs
T160	SP	NTSC	3 hrs
T160	EP	NTSC	8 hrs
T180	EP	NTSC	9 hrs
E180	SP	PAL	3 hrs
E180	LP	PAL	6 hrs
E240	SP	PAL	4 hrs
E240	LP	PAL	8 hrs

DISPLAY SETTINGS

The VCR adds alphanumeric information to the video signal from the camera and sends it to the VCR for recording or to the monitor to display. The display settings let you select the position, the gray scale and the format of the text. Following are the options in display settings.

Display Format

The display format displays alphanumeric information either on the top or bottom of the screen. To set the display use the following instructions.

- 1 From the remote control press the "STOP" button for 5 seconds, the main menu will pop up on the screen.
- 2 Under the main menu move the cursor in front of "Display Setting" and press the "F.F." button.
- 3 The "Display Setting" menu will pop up on the screen as shown in the figure below.

Display Setting	
Display Format	Bottom
Horizontal Position	
Vertical Position	
Gray Scale/ Background	
VCR Status	
Input Voltage	
Temperature	
Exit	

- 4 Under the Display setting menu place the cursor in front of "display Format" using the "+" or "-" button.
- 5 To select a display format press the "F.F." button.
- 6 Now choose either "Top" or "Bottom" using the "+" or "-" button.
- 7 Press the "F.F." button to chose your selection.
- 8 Exit all of the menus to activate your selection.

Horizontal Position

Horizontal position sets the alphanumeric text position horizontally. Follow the steps below to set the Horizontal position.

- 1 Under the display setting menu place your cursor in front of "Horizontal Position".
- 2 Press the "F.F." button to select the horizontal position.
- 3 A small box will pop up on the screen.
- 4 Press the "+" or "-" button to select the appropriate position.
- 5 After selecting the position press the "F.F." button
- 6 Exit all of the menus to activate your selection.

Vertical Position

Vertical position sets the alphanumeric text position vertically. If the Display Format is set on "TOP" then the vertical position lets you choose the position from the top of the screen to the middle of the screen. If the display format is set to the bottom then the vertical position can be moved from the middle of the screen to the bottom of the screen. Follow the steps below to set the vertical position.

- 1 Under the Display setting place the cursor in front of vertical position.
- 2 Press the "F.F." button to select "vertical position".
- 3 A small box will pop up on the screen.
- 4 Press the "+" or "-" button to select the appropriate vertical position.
- 5 After selecting the position press the "F.F." button.
- 6 Exit all of the menus to activate your selection.

Gray Scale / Background

Gray Scale/ Background color sets the gray scale and background color of the alphanumeric text on the display. Follow the procedure below to set the gray scale or background color.

- 1 Under the Display setting place the cursor in front of gray scale/back ground color.
- 2 Press the "F.F." button to select "gray scale/background color".
- 3 A small box will pop up on the screen.
- 4 Press the "+" or "-" button to select the appropriate gray scale or background color.
- 5 After selecting the gray scale or background color press the "F.F." button.
- 6 Exit all of the menus to activate your selection.

Tape Counter

The tape counter displays the time left to record . To turn on the Tape counter follow the instructions below.

- 1 Under the Display setting place the cursor in front of tape counter.
- 2 Press the "F.F." button to select "Tape counter".
- 3 Press the "+" or "-" button to turn the VCR Status either "ON" or "OFF".
- 4 After making the selection press the "F.F." button.
- 5 Exit all of the menus to activate the selection.

VCR Status

VCR Status displays all the VCR operating modes on the screen. Follow the procedure below to turn the VCR Status On/Off.

- 1 Under the Display setting place the cursor in front of VCR Status.
- 2 Press the "F.F." button to select "VCR Status".
- 3 Press the "+" or "-" button to turn VCR Status either "ON" or "OFF".
- 4 After making the selection press the "F.F." button again.
- 5 Exit all of the menus to activate the selection.

Input Voltage

The VCR can display the input voltage on the screen. You can turn off or on the voltage message from the display settings. A "LOW VOLTAGE" message will start flashing on the screen if the input voltage is less than 9V. If the voltage is less than 9 V and the cassette is out then a "CASS OUT" message will start flashing on the screen. The VCR will not accept a tape if the input voltage is less than 9V. Follow the steps below to turn the voltage display on or off.

- 1 Under the main menu place the cursor in front of Display Setting and press the "F.F" button.
- 2 Now place the cursor in front of Input Voltage and press the "F.F." button.
- 3 Press the "+" or "-" button to select "ON" or "OFF".
- 4 Exit all of the menus to activate your selection.

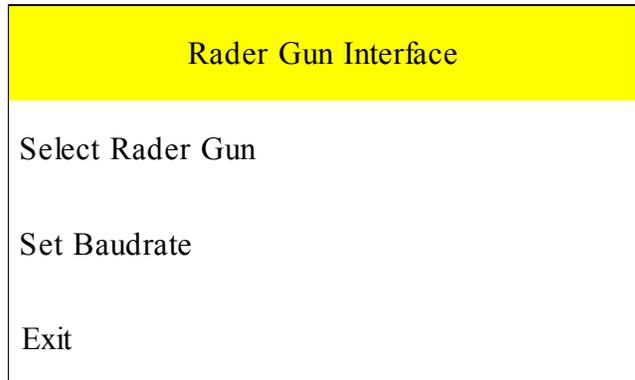

Temperature

A built in temperature sensor tracks the internal temperature of the VCR . You can view the internal temperature by enabling the temperature display in the display setting menu. If the temperature goes higher than 90 F then the Fan Output is activated (active low). If the temperature goes lower than 40 F then the Heater output is activated (active low). If the temperature goes lower than 32 F then the VCR will be turned off. Follow the steps to enable the temperature display on the screen.

- 1 Under the main menu place the cursor in front of Display settings and press the "F.F." button.
- 2 Place the cursor in front of Temperature and press the "F.F" button.
- 3 Press the "+" or "-" button to select "ON" or "OFF".
- 4 Exit all of the menus to activate your selection.

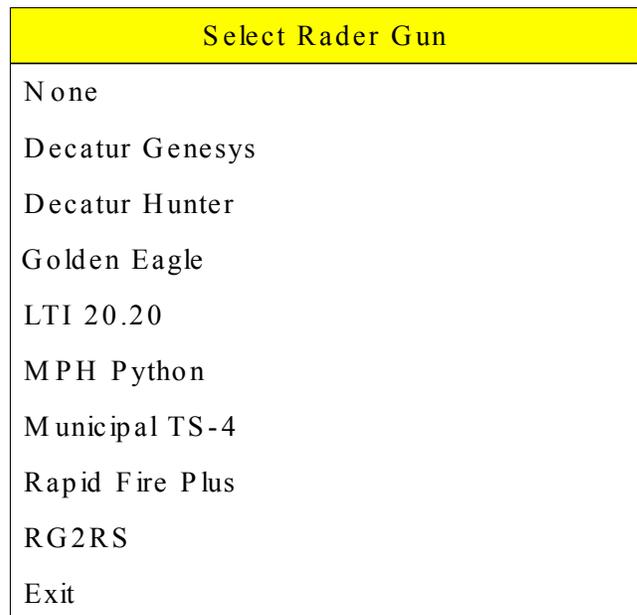

RADAR GUN INTERFACE

The radar gun interface submenu displays the choices of the manufacture of the radar gun. This menu also lets you set the baud rate between the interface and the radar gun. The following menu will appear if you select the radar gun interface from the main menu.

Select Radar Gun

Select Radar Gun submenu lets you select the radar gun that you want to use with the VCR. To access the radar gun interface place cursor in front of Radar gun interface and press the "F.F" button. The following menu will pop up on the screen:

NONE

This is the default setting, and the setting you should leave it chosen you do not have a radar gun connected to the VCR.

GENERIC

This accepts any RS-232 data and displays it on the monitor. This can be from a computer, a BAC, or other device with RS-232 communications.

DECATUR HUNTER, DECATUR GENESYS, GOLDEN EAGLE, LTI 20.20, MPH PYTHON, MUNICIPAL , OR RAPID FIRE PLUS

These are specific types of radar guns for which settings have been programmed into the VCR-322-Plus

RG2RS

This is American Video Equipment's Radar Gun Interface, which, when installed with the VCR, will enable the following radar guns to connect to the VCR: The RG2RS must be purchased separately and is not included with the VCR-322-Plus.

ACM STALKER
Decatur HUNTER, GENESYS 1 & II
KUSTOM KR-10SP, TROOPER
MPH K-55
TARGETRON RAPID FIRE PLUS

BAUD RATE

Here you select the correct Baud Rate for your Radar gun. The choices available are: 1200, 2400, 4800, & 9600.

MASTER RESET

Master Reset, resets all the programming to factory default settings. Follow the steps below to do a Master Reset.

- 1 Under the main menu place the cursor in front of " Master Reset".
- 2 Press the "F.F." button to choose the selection.
- 3 The master reset menu will pop up on the screen.
- 4 Use the "+" or "-" buttons to place the cursor in front of " Do Master Reset"
- 5 Press the "F.F." button to perform a master reset on the VCR.
- 6 A copyright menu will pop up on the screen notifying you that the VCR has been reset.

Warning: If you do a Master reset this will clear all settings and exit the programing mode.

Warranty Information

The PROSECUTOR 2000 system is covered by a ONE YEAR Warranty for all parts and labor. To obtain service, order parts, or accessories simply call Prosecutor of Texas between 8am-5pm Central Standard Time at (800)-482-9211. Should you need any service for your system, you will be given an RMA # with shipping instructions. You **MUST** have an RMA # on your package before we can accept it.

We do repair work on an individual basis. If quote, for service, is **less** than \$100, work will automatically be performed. If quote, for service, is **more** than \$100, we will contact and get customer authorization, before any work will be performed.

Thank you for using Prosecutor 2000.
